

Proportional Review

Name: _____

If two things are proportional that means doubling one (or tripling, or multiplying by 1.23) causes the other to double (or triple, or multiply by 1.23) as well.

Example: Hours worked and money earned (no over time): Proportional
 Hours worked and money earned (with overtime): Not Proportional

1. Mark on test and percentage on test

2. Age and height:

3. Kilometres driven and gas used

4. Height and musical ability

5. Number of people in a town, number of men in a town

6. Number of people in a school who don't smoke, percentage of people in a school who don't smoke

7. Amount of pop you buy and the cost of the pop you buy

8. Temperature and length of class
