

Log

You will be working on a variety of different activities, some days you will make quick progress and produce a lot of amazing products, other days you will try things which don't work. This is part of making anything. Generally, you will learn more from the failures than the successes.

Regardless of how much progress you are making, it is important to keep track of what you are working on. Reviewing your work gives you a different perspective on that work. Many people find this allows them to better focus on their goals, make plans and achieve some meta-cognition (understanding how they work). It allows you to come back to work after a break and clearly see where you left off. If you are part of a team it allows other members to continue your work. It also will allow Mr. Nelson to keep track of your progress.

You will keep track of your work using a Google Calendar and will create two types of events:

Reflection: Each day during the last 5 minutes of class you will create an "event" for that day which will be colour coded **green** with a 20 to 50 word description of what you worked on in class that day.

Plan: You will also create an "event" for the next day of class which will be colour coded **blue** with a 5 to 50 word description of what you plan to work on the next day.

The log will be worth 10% of your grade. Marks will be deducted if plans or reflections are not the correct length, not colour coded properly, or if the plans or reflections do not accurately describe your work.
