

1. A person pulls a 15 kg sled using a rope at an angle of 30.0° above the horizontal with 55 N of force. If the sled moves at a constant velocity horizontally through the snow what is
 - a. The normal force acting between the sled and the snow?
 - b. The coefficient of friction between the snow and the sled?

a) Since sled is not accelerating up or down
Upwards force = Downwards force

$$F_N + F_{\text{apply}} = F_g$$

$$F_N = F_g - F_{\text{apply}}$$

$$F_N = 147\text{N} - 27.5\text{N} = 119.5\text{N} \approx \boxed{120\text{N}}$$

b) $F_{\text{fric}} = F_{\text{appx}}$ since the sled is moving at constant velocity

$$F_{\text{fric}} = 47.63\text{N} = \mu F_N$$

$$\rightarrow \frac{47.63\text{N}}{119.5\text{N}} = \boxed{0.40}$$

2. A 5 500 kg helicopter is travelling at constant speed in level flight.

What is the force F provided by the rotor?

$$\begin{aligned} \text{Force up} &= \text{Force down} \\ \text{Upwards} & \\ \text{component} & \\ \text{of force} & \\ \text{from rotor} & = F_g \end{aligned}$$

$$\begin{aligned} &= mg = 5500 \times 9.8 \\ &= 53900 \text{ N} \end{aligned}$$

Solve for F , $\cos 25^\circ = \frac{53900 \text{ N}}{F}$

$$F = \frac{53900 \text{ N}}{\cos 25^\circ} = 59472 \text{ N}$$

$$\approx \textcircled{59000 \text{ N}}$$

3. A 20.0 kg rocket is launched from Earth aimed 55° above the horizontal. The force output of the rocket engine is 400.0 N. What is the acceleration of the rocket (magnitude and direction)?

$$\begin{aligned}
 & \text{400 N} \\
 & \text{55}^\circ \\
 & \sin 55^\circ \times 400 \\
 & = 327.66 \text{ N} \\
 & \cos 55^\circ \times 400 \\
 & = 229.43 \text{ N}
 \end{aligned}$$

$$\begin{aligned}
 F_{\text{net in } y} &: 327.66 - 196 \\
 &= 131.66 \text{ N upwards}
 \end{aligned}$$

$$F_{\text{net in } x}: 229.43$$

$$\sqrt{131.66^2 + 229.43^2}$$

$$= 264.52 \text{ N}$$

$$\theta = \tan^{-1} \left(\frac{131.66}{229.43} \right)$$

$$= 30^\circ$$

$$F_{\text{net}} = ma \rightarrow \frac{F_{\text{net}}}{m} = a$$

$$\frac{264.52 \text{ N}}{20.0 \text{ kg}} = 13.2 \text{ m/s}^2$$

13 m/s², 3.0 × 10¹° above the horizontal
